06 - Description

WAVY Screen is a lightweight and flexible wooden panel. Each panel consists of systematically cut and veneered layers of plywood and foam, which are converted into an integrated structure. The behavior and the characteristics of each basic material provide a combination of a balanced and resilient material. The wavy surface also provides acoustic properties through reflection and / or insulation.

07 - Application

Sound diffusion and noise insulation spatial divider.

08 - Usage

Interior architecture

09 - Ecology

It is a lightweight, easily transported material that efficiently accesses trees as plywood. The panels can be readily re-furbished, redefined and repurposed.
